Trademarks

Compliance

CE

This is a class B product. In a domestic environment, this product may cause radio interference in which case users may be required to take adequate measures.

FC

This product has been tested and found to comply with the limits for a Class A device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with manufacturer's instructions, may cause harmful interference to radio communications.

WEEE

This product must not be disposed of as normal household waste, in accordance with the EU directive of for waste electrical and electronic equipment (WEEE - 2012/19/EU). Instead, it should be disposed of by returning it to a municipal recycling collection point. Check local regulations for disposal of electronic products.

Green IBASE

This product is compliant with the current RoHS restrictions and prohibits use of the following substances in concentrations exceeding 0.1% by weight (1000 ppm) except for cadmium, limited to 0.01% by weight (100 ppm).

- Lead (Pb)
- Mercury (Hg)
- Cadmium (Cd)
- Hexavalent chromium (Cr6+)
- Polybrominated biphenyls (PBB)
- Polybrominated diphenyl ether (PBDE)

iBASE

Important Safety Information

Carefully read the precautions before using the board.

Environmental conditions:

- Use this product in environments with ambient temperatures between 0˚C and 60˚C.
- Do not leave this product in an environment where the storage temperature may be below -20° C or above 80° C. To prevent from damages, the product must be used in a controlled environment.

Care for your IBASE products:

- Before cleaning the PCB, unplug all cables and remove the battery.
- Clean the PCB with a circuit board cleaner or degreaser, or use cotton swabs and alcohol.
- Vacuum the dust with a computer vacuum cleaner to prevent the fan from being clogged.

 WARNING

Attention during use:

- Do not use this product near water.
- Do not spill water or any other liquids on this product.
- Do not place heavy objects on the top of this product.

Anti-static precautions

- Wear an anti-static wrist strap to avoid electrostatic discharge.
- Place the PCB on an anti-static kit or mat.
- Hold the edges of PCB when handling.
- Touch the edges of non-metallic components of the product instead of the surface of the PCB.
- Ground yourself by touching a grounded conductor or a grounded bit of metal frequently to discharge any static.

 CAUTION

Danger of explosion if the internal lithium-ion battery is replaced by an incorrect type. Replace only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions or recycle them at a local recycling facility or battery collection point.

Warranty Policy

- **IBASE standard products:**

  24-month (2-year) warranty from the date of shipment. If the date of shipment cannot be ascertained, the product serial numbers can be used to determine the approximate shipping date.

- **3rd-party parts:**

  12-month (1-year) warranty from delivery for the 3rd-party parts that are not manufactured by IBASE, such as CPU, CPU cooler, memory, storage devices, power adapter, panel and touchscreen.

∗ PRODUCTS, HOWEVER, THAT FAIL DUE TO MISUSE, ACCIDENT, IMPROPER INSTALLATION OR UNAUTHORIZED REPAIR SHALL BE TREATED AS OUT OF WARRANTY AND CUSTOMERS SHALL BE BILLED FOR REPAIR AND SHIPPING CHARGES.

Technical Support & Services

1. Visit the IBASE website at www.ibase.com.tw to find the latest information about the product.
2. If you need any further assistance from your distributor or sales representative, prepare the following information of your product and elaborate upon the problem.

   - Product model name
   - Product serial number
   - Detailed description of the problem
   - The error messages in text or in screenshots if there is any
   - The arrangement of the peripherals
   - Software in use (such as OS and application software, including the version numbers)

3. If repair service is required, you can download the RMA form at http://www.ibase.com.tw/english/Supports/RMAService/. Fill out the form and contact your distributor or sales representative.

iBASE

1.1   Introduction

MI999 is a Mini-ITX motherboard based on 10th Gen. Intel® Xeon® W/ Core™ / Pentium® / Celeron® processor. Designed for a broad range of markets, including industrial control & automation, digital signage, thin client, gaming, and transportation applications, it offers high-definition visual experience with high performance graphics processing.

Photo of MI999

1.2   Features

- 2 x DDR4 SO-DIMM, expandable up to 64 GB, ECC supported Xeon/I3 CPU SKUs

- Dual Gigabit LAN

- 1 x HDMI, 1 x DisplayPort, 1 x DVI-D, 1 x eDP or 1 x 24-bit dual channel LVDS

- 6 x USB 3.1, 4 x SATA III, 4 x serial ports

- PCIe (x16), M.2 M2280 (for MI999AF-W / MI999AF-Q series only) and E2230 expansion slots

- Configurable watchdog timer and digital I/O

- TPM compliant

1.3   Packing List

Your product package should include the items listed below. If any of the items below is missing, contact the distributor or dealer from whom you purchased the product.

- MI999AF Motherboard

- I/O Shield

- SATA Cable (SATA-3F)

- COM Port Cable (PK1-20BK)

- Disk (including chipset drivers)

- This User's Manual

1.4   Optional Accessories

IBASE provides optional accessories as follows. Please contact us or your dealer if you need any.

- Audio Cable (Audio-34)

- USB Cable (USB-29)

iBASE

1.5   Specifications

Product Name	• MI999AF-W • MI999AF**E**-W	• MI999AF-Q • MI999AF**E**-Q	• MI999EF-H • MI999EF**E**-H
Form Factor	Mini ITX motherboard		
System			
Operating System	• Windows 10 (64-bit) • Linux Ubuntu (64-bit) • Windows Server 2019 (For MI999AF(E)-W)		
CPU	- Intel® 10th Gen. Xeon®-W / Core™ / Pentium® / Celeron®, Speed up to 4.8GHz		
CPU Socket	LGA1200		
Chipset	W480E	Q470E	H420E
Memory	-SO-DIMM@ 260-pin x 2 for DDR4-2933/ 2666 @1.2V, Max. =64GB **ECC supported by W480E + specified processors only**

Chapter 2
Hardware Configuration

This section provides information on jumper settings and connectors on the board in order to set up a workable system. On top of that, you will also need to install crucial pieces such as the CPU and the memory before using the product. The topics covered are:

- Essential installations
- Jumper and connector locations
- Jumper settings and information of connectors

iBASE

2.1   Installations

2.1.1   Installing the CPU

1.   Unlock the CPU socket by pressing the lever sideways, then lift up the lever and the metal lid.

2.   Position the CPU above the socket such that the CPU corner aligns with the gold triangle matching the socket corner with a small triangle.
3.   Carefully insert the CPU into the socket and push down the lever to secure the CPU.

Then install the CPU cooler and fan back.

Note: Ensure that the CPU cooler and the CPU top surface are in total contact to avoid CPU overheating problem that would cause your system to hang or be unstable.

2.1.2   Installing the Memory

To install the modules, locate the memory slot on the board and perform the following steps.

1.   Press the ejector tab of the memory slot outwards with your fingertips.

2.   Hold the meomry module and align the key of the module with that on the memory slot.

3.   Gently push the module in an upright position unitl the ejector tabs of the memory slot close to hold the module in place when the module touches the bottom of the slot.
To remove the module, press the ejector tabs outwards with your fintertips to eject the module.

2.2   Setting the Jumpers

Set up and configure your product by using jumpers for various settings and features according to your needs and applications. Contact your supplier if you have doubts about the best configuration for your use.

2.2.1   How to Set Jumpers

Jumpers are short-length conductors consisting of several metal pins with a non-conductive base mounted on the circuit board. Jumper caps are used to have the functions and features enabled or disabled. If a jumper has 3 pins, you can connect either PIN1 to PIN2 or PIN2 to PIN3 by shorting.
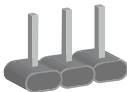

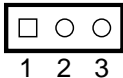

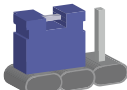

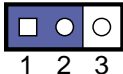

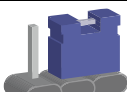

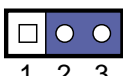

A 3-pin jumper   **A jumper cap**

Refer to the illustration below to set jumpers.

Pin closed	Oblique view	Illustration
Open		
1-2		
2-3		

When two pins of a jumper are encased in a jumper cap, this jumper is **closed**, i.e. turned **On**.
When a jumper cap is removed from two jumper pins, this jumper is **open**, i.e. turned **Off**.

J18 provides light indication of the computer activities and switches to change the computer status. The functions are as follows:

- **ATX Power ON Switch (Pin 1 and Pin 2)**

  Pin 1 and Pin 2 is the "ATX Power Supply On/Off Switch" for the system that connects to the power switch on the case. When pressed, the power switch will force the system to power on. When pressed again, it will power off the system.

- **Hard Disk Drive LED Connector (Pin 3 and Pin 4)**

  This connector connects to the hard drive activity LED on control panel. This LED will flash when the HDD is being accessed.

- **Reset Switch (Pin 5 and Pin 6)**

  The reset switch allows you to reset the system without turning the main power switch off and then on again. Orientation is not required when making a connection to this header.

- **Power LED (Pin 7 and Pin 8)**

  This connector connects to the system power LED on control panel. This LED will light when the system turns on.

Chapter 3
Drivers Installation

This chapter introduces installation of the following installations:

- Intel Chipset Software Installation Utility

- Intel HD Graphics Driver

- Realtek High Definition Audio Driver

- Intel PRO LAN Network Drivers

- Intel ME 14.x Drivers

iBASE

3.1 Introduction

This section describes the installation procedures for software and drivers. The software and drivers are included with the motherboard. If you find anything missing, please contact the distributor where you made the purchase. The contents of this section include the following:

Note: After installing your Windows operating system, you must install the Intel® Chipset Software Installation Utility first before proceeding with the drivers installation.

3.2 Intel® Chipset Software Installation Utility

The Intel® Chipset drivers should be installed first before the software drivers to install INF files for Plug & Play function for Intel chipset components. Follow the instructions below to complete the installation.

1. Insert the disk enclosed in the package with the board. Click **Intel** on the left pane and then **Intel(R) CometLake Chipset Drivers** on the right pane.

2. Click **Intel(R) Chipset Software Installation Utility**.

3. When the *Welcome* screen to the Intel® Chipset Device Software appears, click **Next** to continue.

4. Click **Yes** to accept the software license agreement and proceed with the installation process.

5. On the *Readme File Information* screen, click **Install**.
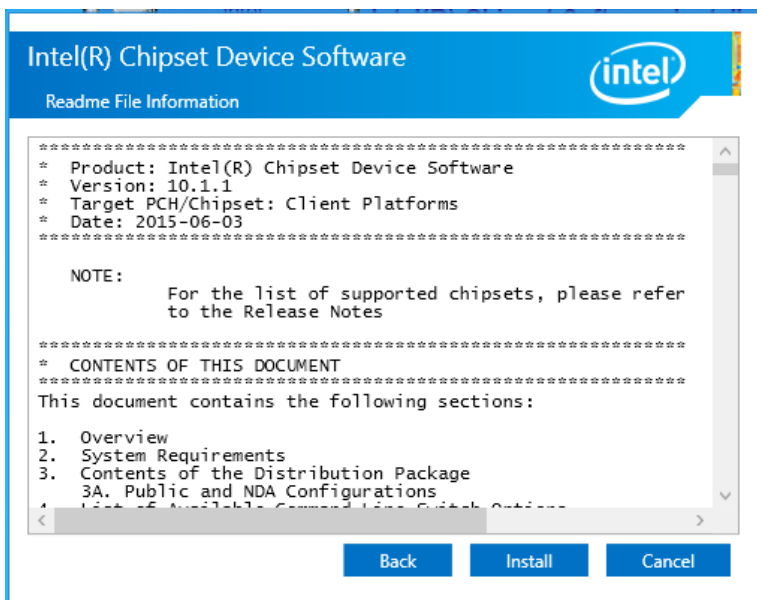

6. After the Intel Chipset Device Software has been installed, click **Finish** to complete the setup process.

iBASE

3.3 VGA Driver Installation

1. Insert the disk enclosed in the package with the board. Click **Intel** on the left pane and then **Intel(R) CometLake Chipset Drivers** on the right pane.

2. Click **Intel(R) HD Graphics Driver**.

3. When the *Welcome* screen appears, click **Next** to continue.

4. Click **Yes** to accept the license agreement and click **Next**.

5. In the Readme File Information screen, click **Next** to continue.

6. Whent Setup is complete, click **Finish**

3.4 Realtek High Definition Audio Driver

1. Insert the disk enclosed in the package with the board. Click **Intel** on the left pane and then **Intel(R) CometLake Chipset Drivers** on the right pane.

2. Click **Realtek High Definition Audio Driver**.

3. On the *Welcome* screen of the InstallShield Wizard, click **Next**. The InstallShield Wizard will install the driver on your computer.

4. When the InstallShield Wizard has successfully installed the audio driver, restart the computer.

iBASE

3.5   Intel(R) PRO LAN Network Drivers

1.   Insert the disk enclosed in the package with the board. Click **Intel** on the left pane and then **Intel(R) CometLake Chipset Drivers** on the right pane.

2.   Click **Intel(R) PRO LAN Network Drivers**.
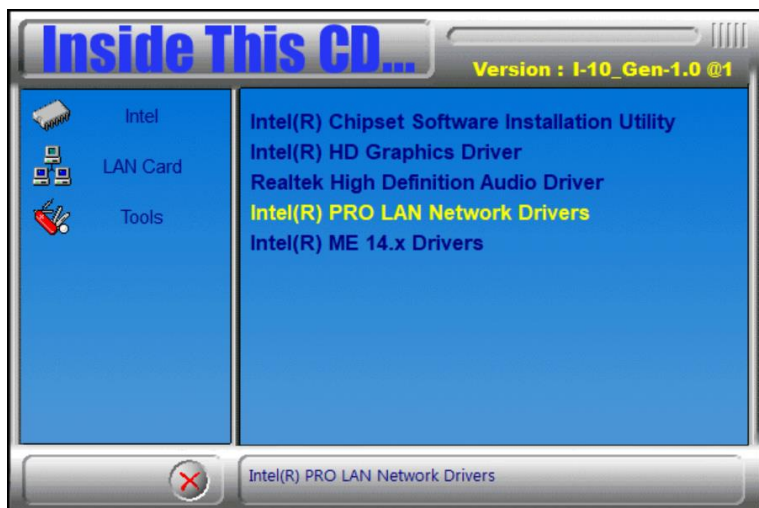

3.   On the next screen, click **Install Drivers and Software**.

4.   On the *Welcome* screen, click **Next**.

5.   Click **Next** to accept the license agreement.

6.   Select the program features you want installed and click **Next**.

7.   Click **Install** to begin the installation.

3.6   Intel(R) ME 14.x Drivers

1.   Insert the disk enclosed in the package with the board. Click **Intel** on the left pane and then **Intel(R) CometLake Chipset Drivers** on the right pane.

2.   On the next screen, click **Intel(R) ME 14.x Drivers**.

3.   On the *Welcome* screen, click **Next**.

4.   Click **Next** to accept the license agreement.

5.   In the *Destination Folder* screen, click **Next**.

6.   When the Intel management engine components have been successfully installed, click **Finish**.

This page is intentionally left blank.

Chapter 4
BIOS Setup

This chapter describes the different settings available in the AMI BIOS that comes with the board. The topics covered in this chapter are as follows:

- Main Settings
- Advanced Settings
- Chipset Settings
- Security Settings
- Boot Settings
- Save & Exit

iBASE

4.1 Introduction

The BIOS (Basic Input/Output System) installed in the ROM of your computer system supports Intel® processors. The BIOS provides critical low-level support for standard devices such as disk drives, serial ports and parallel ports. It also provides password protection as well as special support for detailed fine-tuning of the chipset controlling the entire system.

4.2 BIOS Setup

The BIOS provides a Setup utility program for specifying the system configurations and settings. The BIOS ROM of the system stores the Setup utility. When you turn on the computer, the BIOS is immediately activated. Press the <Del> key immediately allows you to enter the Setup utility. If you are a little bit late pressing the <Del> key, POST (Power On Self Test) will continue with its test routines, thus preventing you from invoking the Setup.

If you still need to enter Setup, restart the system by pressing the "Reset" button or simultaneously pressing the <Ctrl>, <Alt> and <Delete> keys. You can also restart by turning the system Off and back On again.

The following message will appear on the screen:

```
                 Press   <DEL>   to   Enter   Setup
```

In general, press the arrow keys to highlight items, <Enter> to select, the <PgUp> and <PgDn> keys to change entries, <F1> for help, and <Esc> to quit.

When you enter the BIOS Setup utility, the *Main Menu* screen will appear on the screen. The Main Menu allows you to select from various setup functions and exit choices.

Warning: It is strongly recommended that you avoid making any changes to the chipset defaults.

These defaults have been carefully chosen by both AMI and your system manufacturer to provide the absolute maximum performance and reliability. Changing the defaults could make the system unstable and crash in some cases.

4.3 Main Settings

```
                              Aptio Setup — AMI
   Main  Advanced  Chipset  Security  Boot  Save & Exit

   BIOS Information                                    Set the Date. Use Tab to
                                                       switch between Date elements.
   BIOS Version               MI999AF-Q-JS001-201006   Default Ranges:
                                                       Year: 1998-9999
   Total Memory               8192 MB                  Months: 1-12
   Memory Frequency           2400 MHz                 Days: Dependent on month

BIOS Setting	Description
Connectivity Configuration	Configures connectivity related options.
CPU Configuration	Displays CPU configuration parameters.
Power & Performance	Power & Performance control options.
PCH-FW Configuration	Configures management engine technology parameters.
Trusted Computing	Trusted computing settings.
ACPI Settings	Displays system ACPI parameters.
LVDS (eDP/DP) Configuration [1]	Configures LVDS (eDP/DP).
F81964 Super IO Configuration	Displays super IO chip parameters.
F81964 Hardware Monitor	Shows super IO monitor hardware status.
USB Configuration	Displays USB configuration parameters.
Network Stack Configuration	Netowrk Stack settings.
NVMe Configuration [2]	NVMe device option settings.

[1]: LVDS (eDP/DP) Configuration is available for MI999AF series and MI999EF.
[2]: NVMe Configuration is available for MI999AF series only.

4.4.1   Connectivity Configuration
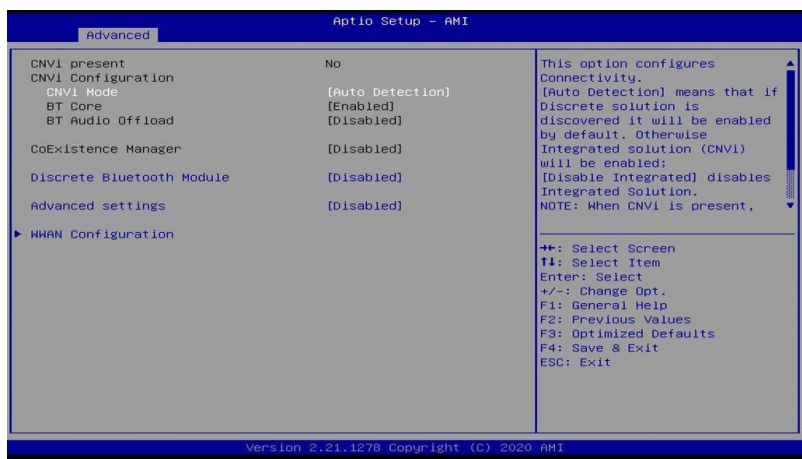

BIOS Setting	Description
CNV1 Mode	This option configures connectivity. **Auto Detection** means that if Discrete solution is discovered it will be enabled by default. Otherwise Integrated solution (CNV1) will be enabled. **Disable Integrated** disables Integrated Solution.
CoExistence Manager	CoEx Manager mitigates radio coexistence issues between Intel WWAN (modem) and Intel WLAN (WiFi/BT). This should be enabled only if both WWAN and WLAN solution are based on Intel components.
Discrete Bluetooth Module	Serial I/O UART0 needs to be enabled to select BT module.
Advanced settings	Configures ACPI objects for wireless devices.
WWAN Configuration	Configures WWAN related options.

4.4.2   CPU Configuration
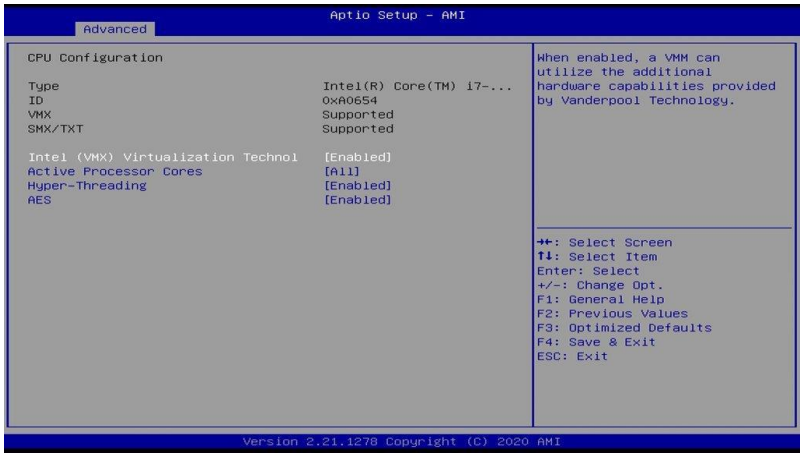

BIOS Setting	Description
Intel (VMX) Virtualization Technology	Enables / Disables a VMM to utilize the additional hardware capabilities provided by Vanderpool Technology.
Active Processor Cores	Number of cores to enable in each processor package. Options: All, 1, 2, 3, 4, 5
Hyper-Threading	**Enabled** for Windows XP and Linux (OS optimized for Hhyper-Threading Technology) and **Disabled** for other OS (OS not optimized for Hyper-Threading Technology).
AES	Enables / Disables AES (Advaned Encryption Standard).

4.4.3 Power & Performance

```
                              Aptio Setup – AMI
        Advanced
    Power & Performance                                    CPU – Power Management Control

  ▶ CPU – Power Management Control
```

```
                              Aptio Setup – AMI
        Advanced
    CPU – Power Management Control                         Select the performance state
                                                           that the BIOS will set
    Boot performance mode              [Turbo Performance] starting from reset vector.
    Intel(R) SpeedStep(tm)             [Enabled]
    Intel(R) Speed Shift Technology    [Enabled]
    Turbo Mode                         [Enabled]
```

BIOS Setting	Description
CPU – Power Management Control	CPU – Power management control options.
Boot performance mode	Select the performance state that the BIOS will set starting from reset vector. Options: Max Battery, Maxc non-Turbo Performance, and Turbo Performance
Intel(R) SpeedStep(tm)	Allows more than two frequency ranges to be supported.
Intel(R) Speed Shift Technology	Enable/Disable intel Speed Shift Technology support. Enabling will expose the CPPC v2 interface to allow for hardware controlled P-states.
Turbo Mode	Enable/Disable processor Turbo Mode (requires Intel Speed Step or Intel Speed Shift to be available and enabled.)

iBASE

4.4.4 PCH-FW Configuration

4.4.9   USB Configuration
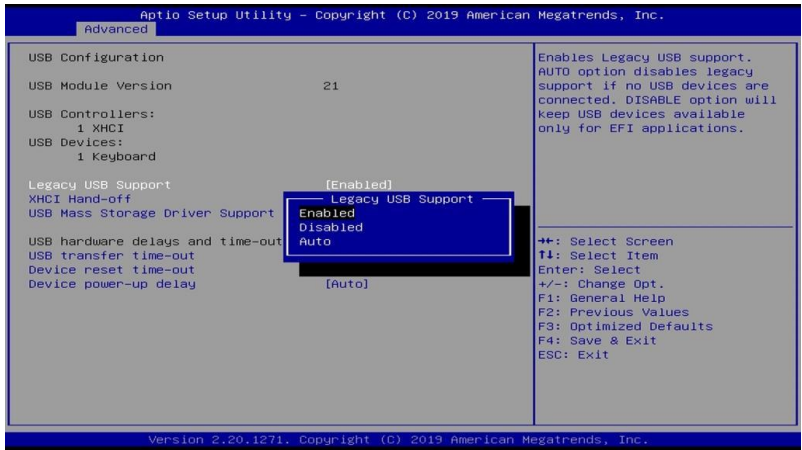

BIOS Setting	Description
Legacy USB Support	Enables Legacy USB support. • **Auto** disables legacy support if there is no USB device connected. • **Disable** keeps USB devices available only for EFI applications.
XHCI Hand-off	This is a workaround for OSes without XHCI hand-off support. The XHCI ownership change should be claimed by XHCI driver.
USB Mass Storage Driver Support	Enables / Disables the support for USB mass storage driver.
USB Transfer time-out	The time-out value for control, bulk, and Interrupt transfers. Options: 1 sec / 5 sec / 10 sec / 20 sec
Device reset time-out	Seconds of delaying execution of start unit command to USB mass storage device. Options: 10 sec / 20 sec / 30 sec / 40 sec
Device power-up delay	The maximum time the device will take before it properly reports itself to the Host Controller. **Auto** uses default value for a Root port it is 100ms. But for a Hub port, the delay is taken from Hub descriptor. Options: Auto / Manual

4.4.10 Network Stack Configuration
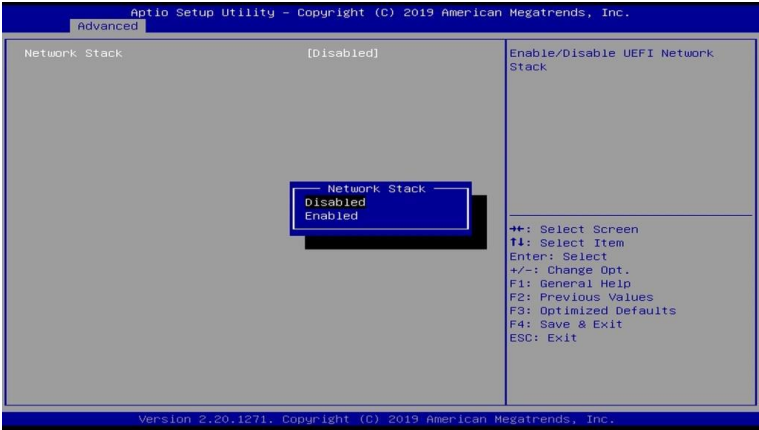

BIOS Setting	Description
Network Stack	Enables / Disables UEFI Network Stack.

```

BIOS Setting	Description
Factory Key Provision	Install factory default Secure Boot keys after the platform reset and while the system is in Setup mode.
Restore Factory Keys	Forces system to use mode. Install factory default Secure Boot Key databases.
Enroll Efi Image	Allow the image to run in Secure Boot mode. Enroll SHA256 Hash certificate of a PE image into Authorized Signature Database (db).
Restore DB defaults	Restore DB variable to factory defaults.
Secure Boot variable	Enroll factory defaults or load certificates from a file. 1. Public key certificate: EFI_SIGNATIRE_LIST, EFI_CERT_X509 (DER), EFI_CERT_RSA2048 (bin), EFI_CERT_SHAxxx 2. Authenticated UEFI Variable 3. EFI PE/COFF image (SHA256)

4.7 Boot Settings

BIOS Setting	Description
Setup Prompt Timeout	Number of seconds to wait for setup activation key.
	65535(0xFFFF) means indefinite waiting.
Bootup NumLock State	Selects the keyboard NumLock state.
Quiet Boot	Enables / Disables Quiet Boot option.
Boot Option Priorities	Sets the system boot order.

iBASE

4.8 Save & Exit Settings
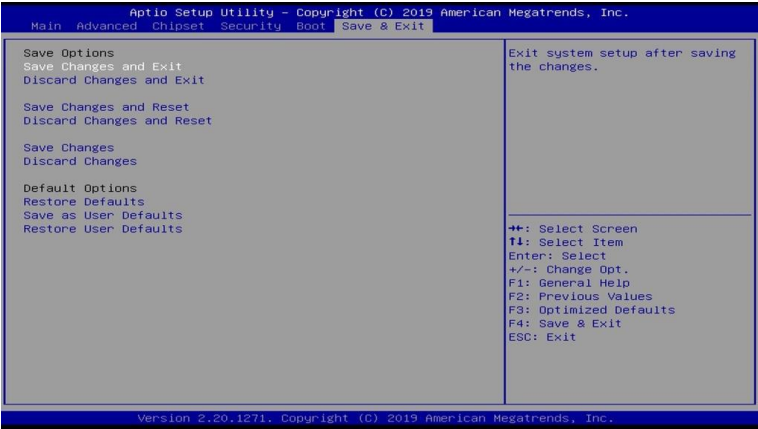

BIOS Setting	Description
Save Changes and Exit	Exits system setup after saving the changes.
Discard Changes and Exit	Exits system setup without saving any changes.
Save Changes and Reset	Resets the system after saving the changes.
Discard Changes and Reset	Resets system setup without saving any changes.
Save Changes	Saves changes done so far to any of the setup options.
Discard Changes	Discards changes done so far to any of the setup options.
Restore Defaults	Restores / Loads defaults values for all the setup options.
Save as User Defaults	Saves the changes done so far as User Defaults.
Restore User Defaults	Restores the user defaults to all the setup options.

Appendix

This section provides the mapping addresses of peripheral devices, the sample code of watchdog timer configuration, and types of on-board connectors.

iBASE

A. I/O Port Address Map

Each peripheral device in the system is assigned a set of I/O port addresses which also becomes the identity of the device. The following table lists the I/O port addresses used.

Address	Device Description
0x00000A00-0x00000A0F	Motherboard resources
0x00000A10-0x00000A1F	Motherboard resources
0x00000A20-0x00000A2F	Motherboard resources
0x0000002E-0x0000002F	Motherboard resources
0x0000004E-0x0000004F	Motherboard resources
0x00000061-0x00000061	Motherboard resources
0x00000063-0x00000063	Motherboard resources
0x00000065-0x00000065	Motherboard resources
0x00000067-0x00000067	Motherboard resources
0x00000070-0x00000070	Motherboard resources
0x00000080-0x00000080	Motherboard resources
0x00000092-0x00000092	Motherboard resources
0x000000B2-0x000000B3	Motherboard resources

C.   Watchdog Timer Configuration

The Watchdog Timer (WDT) is used to generate a variety of output signals after a user programmable count. The WDT is suitable for use in the prevention of system lock-up, such as when software becomes trapped in a deadlock. Under these sorts of circumstances, the timer will count to zero and the selected outputs will be driven.

Under normal circumstance, you will need to restart the WDT at regular intervals before the timer counts to zero.

Sample Code:

```
//-------------------------------------------------------------------------
